A&D Connect Smart

- The following procedure can be used to install and set up the A&D Connect Smart app on an Android phone.
On your Android device click on the Google Play store icon
In the Google Play apps store, type in A&D Connect Smart, and click on the A&D Connect Smart app.
Click on the green Install button.
Click on ACCEPT
Once the app has installed successfully, click on OPEN.
Click on Continue on your screen to open the app.
Click on the three bars on the top left hand corner of your screen.
Click on device Set-up
Click on Blood Pressure Monitor
Make sure no other Bluetooth devices are connected to your phone and follow the instructions on the app.

Press the Start button on your blood pressure monitor until you see Pr on the screen. The pairing process will begin shortly after.

Ensure Bluetooth is turned on for your device.
Press and hold the START button on the Blood Pressure monitor until Pr appears on the display.
Once paring is complete follow the instructions below and click OK.
Again click on the three bars on the top left hand corner of your screen.
Click on Manager User, then add your details on the Manage Account screen, then click on update, then cancel to return to the Dashboard Screen.
You are now ready to start using the app and your Blood Pressure Monitor. With the app open on your device, take a reading with the UA-651BLE Blood Pressure Monitor, using the instructions on page 13 of its manual. Once a reading is taken, the results will be displayed on the app as below.

**Measurements**

Before measurement, read “Notes for Accurate Measurement” on the next page.

**Normal Measurement**

1. Place the cuff on the arm (preferably the left arm). Sit quietly during measurement.

2. Press the [START] button.
   All of the display segments are displayed. Zero is displayed blinking briefly. Then the display changes, as indicated in the figure at the right, as the measurement begins. The cuff starts to inflate. It is normal for the cuff to feel very tight. A pressure bar indicator is displayed, as in the figure at the right, during inflation.

   **Note:** If you wish to stop inflation at any time, press the [START] button again.

3. When inflation is complete, deflation starts automatically and the ❤️ (heart mark) blinks, indicating that the measurement is in progress. Once the pulse is detected, the mark blinks with each pulse beat.

   **Note:** If an appropriate pressure is not obtained, the device starts to inflate again automatically.

4. When the measurement is complete, the systolic and diastolic pressure readings and pulse rate are displayed. The cuff exhausts the remaining air and deflates completely.

5. Press the [START] button again to turn off the power.

**Note:** Model UA-651BLE is provided with an automatic power shut-off function. Allow at least three minutes between measurements on the same person.
